To the Undergraduate Admissions Committee,

It gives me real pleasure to write for Dibias Boro, whom I have taught Mathematics for the past four years. In this time I have come to know him as a sincere and disciplined student, someone who thinks before he speaks. What I have always noticed about him is that he does not just want the answer, he wants to know why the answer is what it is. He is not the kind of boy who rushes to finish first or looks for the easy way out when a concept gets difficult. He would rather sit with a problem a little longer and work it out properly in his head.

In my class Dibias is attentive and well behaved. He listens properly, and when he does not follow something he asks a good question about it, not just any question for the sake of asking. He is also not afraid to say he got something wrong, which is something I value a lot in a student. Many children get upset or lose interest after a bad test or a wrong answer on the board, but Dibias goes back and tries to understand exactly where he slipped. It reminds me a little of my own school days, when I also learned mathematics slowly, through mistakes, and not by getting everything right the first time.

His analytical thinking is one of the things that stands out most to me. During concept-based questions and problem-solving classes, I have seen him work through a problem step by step, in an organised way, before writing his final answer. He is not someone who simply memorises formulas and applies them without thinking. He likes to see how one idea connects to another, and over the years this habit has made him a fairly consistent student, even in topics he did not find easy in the beginning.

He has also improved steadily, year after year. To me this matters more than any single exam score, because it tells me he keeps putting in the effort and is not the type to settle for wherever he happens to be sitting at the moment.

One thing worth mentioning here is his result in the Aryabhata National Mathematics Competition. He got All India Class Rank 77 and All India Rank 2429. It is a good result and I was happy for him, but honestly it did not surprise me much, because it comes from the same patience and logical thinking I have already seen from him in class over these four years.

I have taught many students over the years, of different levels and abilities. Dibias is not the fastest student I have taught, but he is certainly one of the finest, because of the way he thinks about a problem and the way he keeps improving even after getting something wrong. To me, that matters more in the long run than speed ever does.

I am glad to write this letter for Dibias. I have watched him grow as a student of mathematics, and as a person, over these four years, and I am confident he will keep learning and keep putting in honest effort wherever he goes next. I wish him all the best for his time at university.

Sincerely,
Anupam Koner
Mathematics Teacher
